

Doonfoot

At a previous Zoom session, we tried to do a live tour of Keith's layout.

Unfortunately, it was affected by audio problems.

So, we decided to redo the tour as a video.

Keith took multiple short video clips of various parts of his layout, particularly those featuring MERG kits in practice.

I then stitched them together to make a 10 minute video of his layout.

The video shows many kits in use, such as EzyPoints, random lights, dual flasher, the sequencer, the welder, traffic lights, steam emulator, sound players, etc.

Doonfoot Model Railway is a 00 scale DCC/DC layout.

The theme of the layout is a heritage railway celebrating steam railways of the 1940's/1950's, which enables a cross section of locomotives to run together that would not normally have been seen during operational steam.

Grab a coffee and sit back and enjoy the movie!
