Simple Storage Idea

Micro SD cards are now pretty ubiquitous, but the things are really easy to misplace. This little box, put up on Thingiverse by 'Kroki' hold eight of the little blighters, and uses one of the adapter cards that come with them as a sliding lid.

Not only does that mean that the micro-SD cards are securely held, it also means that if you need an adaptor, you have one at hand.

As ever, if you are interested in exploring any of these topics, just let me know, or bring it up at a Sunday zoom chat session.

In the mean time stay safe and well.
