## Pin Vice set

A pin vice set is an invaluable tool for any model maker. The pin vice is a hand held drill holder for making small accurately drilled holes in most thin materials.

The pin vice is particularly useful for drilling plastic as no heat is generated, as opposed to a powered drill which will cause melting.

Thin diecast metal can also be drilled such as for headlamps in diecast metal vehicles.

Usually sold as a set to cover the following drill sizes:

0 - 0.8mm, 0.8 – 1.3mm, 1.3mm - 3.1m, 3.1mm – 4.8mm

Typical cost per set around £5 from eBay
