## SMD Solder bits

I thought the guys might be interested in these solder bits for surface mount components.

The two small bits are for 0805 and the 1206.

The others are for SO-8 & SO-14 IC's.

The adaptor at the back is for a Weller iron, there is a modified Weller bit and a standard Weller tip.

An Antex or any other tip could be modified to take the bits if needed.

They are used to assembly and rework surface mount PCB's.
