## HERZO Rechargeable Rotary Tool

Variable Speed Control with 3 speeds model: 5000rpm, 10000rpm, 15000rpm,

12 accessories such as sanding band, drill bits, grinding wheels, diamond bits

USB Connector for Convenient Charge: Charging 2 hours for continuous work 80 mins, 3.7 V rechargeable lithium battery.

The HERZO rotary tool is a hand held unit designed for craft work and the 3mm capacity chuck can take Dremel or similar attachments. It is an ideal tool for cutting, drilling, and shaping most materials, including brass, where accuracy and fine control is required.

The tool has a fixed chuck, using collets to hold the accessories. The tool comes with two collets, to match the diameters of the accessories provided but a standard collet set can increase the range of accessories that can be used down to a 1mm drill bit. A Dremel chuck can be added but this is not advised as the slack fitting reduces the accuracy of the tool.

There are similar rotary tools available. This one is around £19 from Amazon and I have found it to be indispensable since buying one over a year ago.
