

My housebuilding programming

Part 2

These OO scale buildings were built for use on my show layout.

The Workers Terraced Houses

(Petit Properties)

Made with MDF, with the exterior wrapped in random stone paper.

As this is a flat back kit, the interiors are cut out of adverts in the papers.

The terraced houses have a slope to level off their position on the layout.

Daffodil Cottages

(Petit Properties) MDF

I have three of these in a stagger up hill . This was done by adding a small piece 4mm square wood on the right side bottom and then gluing all three together prior to applying Polyfilla exterior.

Because I did this, the window sills were made of 4mm right angle PVC as the kit sills were too small to cover the filler. This kit is also a flat back.

Most of the roof tiles are from Petit Properties wonky strips. The chimney pots and window frames are from Smart Models , who now do quite a variety including doors.

The leaded window glazing is from Scale Model Scenery.

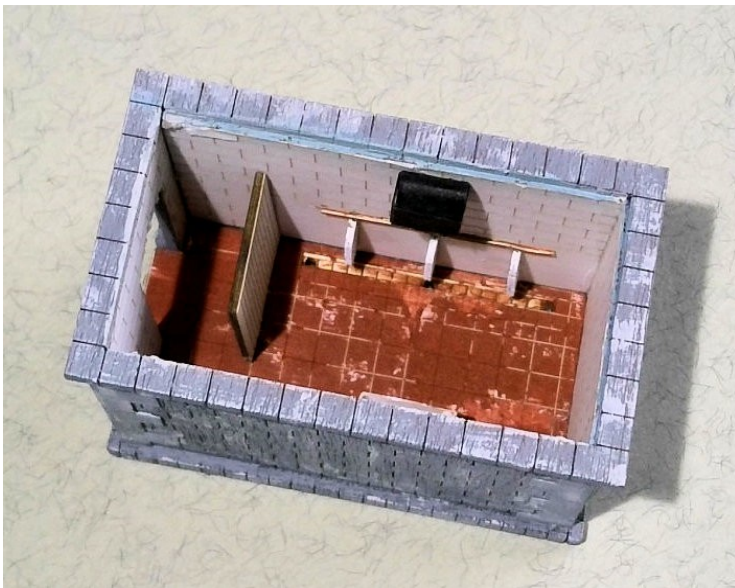

Other internals odd embellishments etc. from the scrap box.

All the Petit Properties kits come with pre drilled bases to run wiring for lights etc.

The Inn

(Petit Properties) MDF.

The unmentionable

Scratch built.
